

Hanna: "Hello, everyone! My name is Hanna, and I'm here with my amazing teammates to present our project, Climate Change, for the International Digital Fest!"

Zayaan: "Hi! I'm Zayaan, and we are excited to showcase how technology can help raise awareness about climate change and sustainability."

Hansa: "And I'm Hasna, and together, we've built an interactive website that combines science and creativity to make a difference!"

Hanna: "The first thing you'll see when you visit our website is the climate toggle—a simple yet powerful tool that allows you to visualize climate change."

Zayaan: "On one side, Earth thrives when we take care of the environment. But flip the toggle, and you'll see the devastating impact of climate neglect. Every action we take matters!"

Hasna: "In the About section, we explore the science behind climate change—what causes it, how it affects our planet, and why urgent action is needed."

Hanna: "We wanted to ensure that visitors get clear, factual information so they understand the reality of climate change before engaging with the interactive sections."

(Causes)Zayaan: "Next, we break down the causes of climate change, including industrial emissions, deforestation, and excessive carbon footprints."

Hasna: "Understanding the root causes helps people make better choices to reduce their environmental impact."

(Prevention)Hanna: "While climate change is a serious issue, we can all take action. In the Prevention section, we provide practical solutions like sustainable energy, eco-friendly habits, and global initiatives."

Hasna: "Every small step counts—whether it's reducing waste, switching to renewable energy, or planting trees!"

(Earth's Pulse)Zayaan: "Our live weather forecast provides real-time updates for any city, showing temperature, humidity, and wind speed, with icons adjusting dynamically based on day and night conditions."

Hasna: "This feature connects users to current climate data, helping them recognize the changing patterns of our environment."

Hanna: "Ever wondered how your daily habits impact the planet? Our carbon footprint calculator lets users enter their energy usage, transportation methods, and lifestyle choices to estimate their CO₂ emissions."

Zayaan:"This tool encourages users to compare their footprint to global averages, motivating them to adopt sustainable habits."

Hasna: "One of our most interactive features is the Oxygen Game—a simple but powerful way to show how trees contribute to oxygen levels and environmental health."

Hanna: "Users can plant trees, watch the oxygen levels rise, and see firsthand how nature fights pollution!"

(Feedback)Zayaan: "Finally, our Feedback section lets visitors share their thoughts on climate change and what they've learned from our website."

Hasna:"We believe that awareness and conversation spark action. Your voice matters, and together, we can make a difference!"

(Closing)Zayaan:"Through Climate Change, we hope to educate, inspire, and empower people to take climate action—because our choices today shape the future!"

Hanna: "Thank you to the International Digital Fest for giving us this platform to share our work. We hope our project sparks conversations that lead to real-world change!Now i would like to conclude by making you all remember there is No planet B."

Thank You
